## Drive Responsibly

### **At CarXPC, your safety is our first priority.**

For your well-being and the well-being of those around you, please follow these simple safety recommendations while driving. Some of these safety tips are not only sensible, but mandatory. Before using your CarXPC vehicle computer, please familiarize yourself with the regulations in your area.

1. When behind the wheel, safe driving is always your first responsibility.
2. Operate your computer when your car is not in motion.
3. Do not allow the computer to distract your driving. Never watch DVD's, Videos or the like while driving. If necessary, rotate the monitor away from sight to avoid such distractions.
4. If others are operating the computer, make sure such operation is not distracting to your driving.
5. When using your Global Positioning Satellite (GPS) software/hardware, do not operate when driving except using voice commands and responses (available in some GPS software programs). If a capable passenger is present in the vehicle, we suggest requesting the passenger to act as your GPS software/hardware operator.
6. Make sure that anyone operating your car is aware of these safety recommendations.
7. **No matter what traffic conditions appear to warrant, driving is a full time responsibility. Pull to a full and safe stop before operating your computer.**
